

Psst... your medication is temperature sensitive.

SO WHAT DO I DO?

Pop your medication into the fridge upon arrival to help maintain its quality. Keep it refrigerated until the listed Beyond-Use Date (BUD), then discard any remaining product.

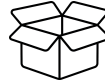

KEEP COOL

Your medication requires refrigeration.

WHAT IF MY MEDICATION IS WARM ON ARRIVAL?

We package all refrigerated medications with ice packs. Even if it's been sitting out in your mailbox or on your front porch, this should not compromise the quality or potency of your medication. A temperature Indicator Is In each package for verification.

DESIGNED WITH YOU IN MIND

Our packages are designed to keep your medication cool in transport. Even if the ice packs melt, your medication retains integrity.
